HEAT PUMP CONTROL

Intelligent control, no matter where you are.

Smart customised control & monitoring

Mitsubishi Electric Wi-Fi Control gives you the freedom to manage your heat pump through your smart phone, tablet or online account, no matter where you are. On the way home, running late, coming home early, or even when you're in a different country, Wi-Fi Control offers innovative realtime management to suit your lifestyle. Now you'll always arrive home to total comfort regardless of what New Zealand's ever changing weather is doing outside!

Not just when you're away.

Mitsubishi Electric Wi-Fi Control offers more than being able to simply preheat or precool rooms before you arrive home. Wi-Fi Control opens up a new world of truly personalised comfort. Effectively replacing your traditional heat pump remote, Wi-Fi Control gives you the freedom to manage your home environment regardless of where you are.

A perfect night's sleep.

Now you can continue to monitor and control your heat pump from the comfort of your couch. Off to the bedroom in half an hour but not sure how cold it is? Wi-Fi Control tells you the actual bedroom temperature so you can preheat or precool your bedroom remotely for a perfect night's sleep.

A warm wake-up on frosty mornings.

Wi-Fi Control is also great for pre-heating your living room before you have to get up in the morning. It will make those early frosty morning starts just that bit easier to face.

Intelligent central control for multiple rooms.

Mitsubishi Electric Wi-Fi Control is not limited to only managing one heat pump at a time. It truly is an intelligent multi tasker. With the purchase of additional adaptors, multiple indoor units can now be seamlessly monitored and controlled. Simple, yet effective centralised control at a your fingertips.

Not just residential, commercial too.

Mitsubishi Electric Wi-Fi Control has been successfully integrated in numerous commercial buildings including offices, motels, and hotels. The ability to provide seamless real time centralised heat pump control as well as unlocking the potential to more energy efficient operation are key drivers for building managers to embrace this new technology.

Multiple units, one app.

Mitsubishi Electric Wi-Fi Control gives you the ability to control the heating and cooling needs of multiple units not just in the same home or building, but across a number of different locations. Your own home, a holiday home and the office – it can all be controlled and customised through one app. Furthermore, you can now group and team control multiple units all at once for consistent comfort.

Be smart, be efficient.

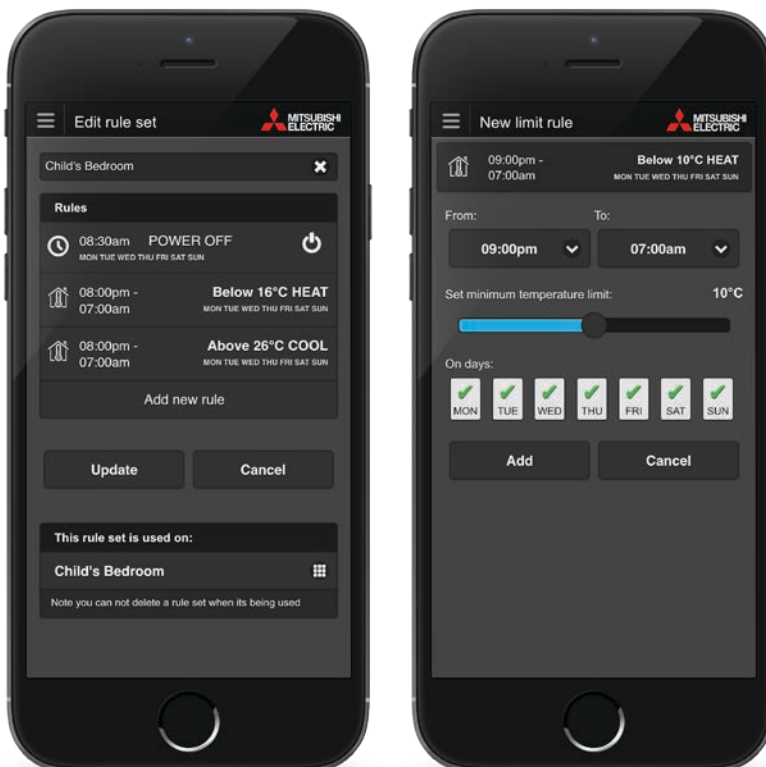

Forgot to turn off your heat pump? Heat pumps mistakenly left running can quickly be identified at a glance and simply be turned off, no matter where you are, saving you from nasty surprises on your power bill!

Your rules, your way.

Mitsubishi Electric Wi-Fi Control intuitive operation offers advanced temperature monitoring and management by reflecting real time room temperature any time. If you want that perfect temperature maintained all night long, the unique rule setting functionality enables you to customise a minimum and maximum temperature rule.

Set Room Temperature Limits

This makes Wi-Fi Control ideal for families with children. You no longer need to physically walk down to each individual bedroom to check the temperature and turn a heat pump on or off using the hand held remotes, potentially interrupting the sleep of children. Simply apply a min/max temperature rule and let Wi-Fi Control do the rest.

- 1 Either choose to edit an existing rule or create a new one.
- 2 Customise to make your heat pump work as you want it to.

Wi-Fi Control: At a glance

One control, any device.

Wi-Fi Control platforms continue to evolve and Mitsubishi Electric is right there at the forefront. Mitsubishi Electric have already launched Wi-Fi Control for smartphones, PCs, and tablets. But what comes next? The development of the world's first smart watch compatible with Wi-Fi Heat Pump Control is well underway! Watch this space – literally!

Modes

Power unit on/off & select desired mode.

Temperatures

Monitor the current room temperature and set to desired temperature.

Fan Speed & Airflow

Adjust the intensity of the fan speed and choose a specific direction or swing.

Smartwatch app currently in development.

Award winning across the range.

INNOVATION EXCELLENCE
2014

Awarded the Canstar Innovation Award 2014, Mitsubishi Electric Wi-Fi Control has been recognised as a game changing technology that has the potential to significantly change peoples lives. Wi-Fi Control is compatible with all Mitsubishi Electric domestic High Wall, Floor Console and Ducted Systems.

Developed in New Zealand, for New Zealand.

True Active Wi-Fi Control evolved through the realisation that the humble traditional Passive Infrared Remote Control no longer keeps up with the busy lives of New Zealanders. Why should being away from home or simply being in a different room, stop your control of your comfort needs? Mitsubishi Electric Wi-Fi Control has changed all that. And because it is locally designed, new features and functionalities will continue to be added, based on what New Zealanders really want.

Minimum Requirements for Operation

You will require the following components to upgrade your Mitsubishi Electric High Wall, Ducted System, or Floor Console Heat Pump to include award winning Wi-Fi Control.

1. Compatible WPS router, capable of WPA2-AES encryption. The wireless network coverage must include the heat pump installation location.
2. A PC or Tablet/Smartphone that is iOS/Android compatible.
3. A compatible Mitsubishi Electric Heat Pump with a MAC-558-IF-E Adaptor. Visit www.mitsubishi-electric.co.nz/wifi for a full list of minimum requirements and owner's responsibilities.
